LUKOIL EXPANDS ITS PRODUCT LINE OF ENGINE OILS FOR JAPANESE
AND KOREAN CARS

LUKOIL has expanded its GENESIS synthetic engine oils line by developing two new products for modern Japanese and Korean cars. The new LUKOIL GENESIS GLIDETECH 0W-20 and LUKOIL GENESIS ARMORTECH A3/B4 5W-30 oils are manufactured at the Company's Perm-based plant.

LUKOIL GENESIS GLIDETECH 0W-20 is officially licensed under API SN-R and ILSAC GF-5 international standards. The low-viscosity product was designed in accordance with the features of modern highly accelerated and turbocharged engines of Toyota, Honda, Mitsubishi, Kia, Hyundai and other Japanese and Korean cars. The oil's specially designed formula provides excellent resistance to oxidation as well as maximum engine protection against wear in severe conditions of urban cycle, high rate of fuel economy and easy cold start.

LUKOIL GENESIS ARMORTECH A3/B4 5W-30 is intended for all-season operation in gasoline and diesel engines of Kia, Hyundai and other cars which require oils with ACEA A3/B4, A3/B3 and/or API SL/CF performance grades and SAE 5W-30 viscosity level. The product's stable viscosity characteristics, in particular HTHS (High Temperature High Shear) facilitate fuel economy and wear protection in severe conditions.

Note to editors:

LUKOIL GENESIS engine oils have been available at the Russian retail market since 2015. As of today, the product line comprises 10 products developed in accordance with the specific design features of modern engines of global carmakers. Since 2012, LUKOIL supplies its GENESIS oils for the first and service fill to the international automotive concern's plants in Russia and Europe.
